

Desktop as a Service (DaaS)

Our turn key, Desktop as a Service, DaaS includes virtual workspace, onsite storage, remote back up and technology services to manage desktops & laptops in an all inclusive monthly service, with savings of up to 80% compared to typical desktop management costs.

The Corporate IT Environment:

Managing IT environments is costly and time consuming. Managing the mobile workforce is even more challenging due to connectivity and security.

The Facts:

IDC reports that up to 80% of Corporate Data resides on end-point desktops and laptops. Managing the mobile workforce can incur significant costs and security breaches creating challenges for IT.

The Solution:

CLICK-into's DaaS (Desktop as a Service) manages the entire Corporate desktop strategy, end-to-end. With our management tool SECURIX Virtual, we provide strong centralized management of the desktop workspace, while providing full workforce mobility and superior end user experience with savings of up to 80%.

Companies can deliver secure, cost-effective desktops that are always on, accessible from anywhere and easy to maintain from one central administration console with CLICK-into's DaaS and managed services.

IT environments expose companies to high maintenance and upgrade costs, endless replacement cycles and security exposures. Managing mobile or at home workers becomes an even greater challenge. When remote employees are unable to access corporate systems, down time reduces productivity. Often companies grapple with data security and privacy. Managing IT is further complicated with multiple locations, and the addition of new sites and temporary users such as contractors.

DaaS

CLICK-into **DaaS** supports your entire desktop and laptop environment delivering enterprise-class Data Center facilities, reliability, security and support of our fully managed **DaaS**, ensures your business is running 7/24.

DaaS Business Advantages

Reduced total cost of computing:

CLICK-into's **DaaS** manages the company's entire desktop strategy, end-to-end. Desktops and Laptops are provided and with preloaded with SECURIX Virtual desktop virtualization software that delivers anytime, anywhere access to your personalized desktop environment containing your applications, data and settings.

Businesses are driven by cost reduction and the ability to focus on their core business – rather than struggling with IT complexity. While data security and compliance, business continuity and green computing are becoming as important.

DaaS Value

- A consultative approach provides cost effective and reliable managed services to meet all your current and future business needs.
- CLICK-into ensures your business is up and running when you need it with full support 7 days a week, 24 hours a day, 365 days per year.
- Desktop Virtualization expertise, support and knowledge combine over 25 years experience deploying and supporting desktop and laptop computing solutions.
- Combined with the onsite storage, CLICK-into offers full back up services and hosting at our secure data center.

Technology Migration: Migration to Windows 7 is a cost effective opportunity with our **DaaS** tools such as SECURIX Virtual. We provide a onetime imaging platform with easy roll back procedures to ensure that migrating to Windows 7 is a simplified approach.

Improved business continuity and productivity:

Business demands instant access to desktops and business systems at anytime, from any device anywhere. Our **DaaS** tools provide desktop virtualization computing which has been found to significantly reduce worker downtime and easily supports today's ever growing mobile-home workers and remote locations. Our **DaaS** services deliver secure, enterprise-class reliability and support for maximum availability.

Data security and compliance:

The risk of data loss or breach is lessened with fully encrypted virtual workspaces being inherently more secure. With all the workspaces, complete with user's applications data and settings being stored onsite, the risk of data loss is further reduced.

SECURIX Virtual stores all your data, applications and settings separate from your physical computer on a central On-site server.

This desktop image can be securely recreated on any PC by retrieving a complete image from the server, without loss of data, applications or settings. PCs are utilized to their full computing capacity. With no local applications to install, fix or update, maintenance and support costs dramatically decrease while users enjoy the same desktop experience

Combined with CLICK-into's remote back-up service, **DaaS** provides even more security and flexibility in business continuity.

Remote and at-home working is more secure as no corporate data is left on virus prone home computers.

Legal conformance with data protection laws is also made easier with workspace virtualization protecting personal records and maintaining privacy.
